PRODUCT NEWS

The following information is provided by Technical Support,
Computer Customer Service, and Computer Merchandising.

PRODUCT CANCELLATIONS

The following products have been cancelled:

TRSDOS 4.4 and related upgrade

26-4740 Model II/12 CP/M (version 1.1) and related upgrade

26-4714 Reformatter (version 2.3) and related upgrade

Upgrade to 3.0 for 26-4706 Compiler BASIC Run-time

IBM PRINTER EMULATOR (700-2118)

The IBM Printer Emulator package has been cancelled.

COLOR COMPUTER SOFTWARE MOVING TO REGIONAL WAREHOUSES

The following software is moving to your regional warehouse and will be stockable by all
stores:

26-3264 TSEDIT
26-3275 DYNACALC
26-3279 PAN
26-3291 VARLOC
26-3292 DESERT RIDER

The following software was originally scheduled for TEW but will be shipping to your
regional warehouse. They will be stockable by all stores.

CSR GRAPEVINE

As indicated by the name, "Grapevine", this section allows Customer Service Representatives to share information with each other. It is here you can communicate your latest findings and "bits of wisdom" to all CSR's. If you wish to contribute to the CSR Grapevine use the Submission Form attached to the last Update of each month. Please be sure to include your Name and Store Number.

NOTE: We attempt to separate fact from fiction but not being omniscient we may occasionally goof. If so, let us know about it. We'll gladly correct ourselves.

WARNING: The information contained in the CSR Grapevine is made available on an "as is" basis for the use of store personnel only. Much of the information will not be supported by Computer Customer Service and in no way shall Tandy Corporation be responsible for any problems caused by the use of this information.

All articles which do not include a by-line came from Computer Customer Service.

UPDATE 1985-45: TANDY 1000 DESKMATE (25-1000) - WITH THE DMP-110 (26-1271)

In the November 15, 1985 RSCC Update page 6, it says "they entered "Y" for single spacing". However, the computer prompt is for double spacing. To avoid confusion, the Update should read, "they entered "N" for double spacing".

(LEONARD THAW, STORE #01Y-2606)

TANDY 600 (26-3901) - INCORRECT EXAMPLE GIVEN IN MANUAL

In the Telcom Tutorial section of the Tandy 600 Manual (page 163), there are instructions for creating a phonebook file. The sample filename used in this example is "phonebook". The program will not accept this name because it is over 8 characters long. The name must be changed in all instances where it occurs throughout the tutorial to a name of 8 or fewer characters.

(LEISHA JOHNSON, STORE #11-7692)

PROFILE III UPGRADE TO PROFILE 4 (700-6211) - CREATING LARGER FILES

The instructions in the Profile III upgrade to Profile 4 for a two floppy system have you create a 6.2 minimum system disk to convert the data files. This leaves 135K available for data. If you need to convert a file larger than this, use Memdisk as the system drive. When setting up Memdisk on a 64K Model 4, select double density and at least 7 cylinders. Backup system files 0, 1, 2, 3, 4, 10 and 12 and the CONV/CMD file to the Memdisk drive. Place your Profile III data disk in drive 1 and a 6.2 formatted disk in drive 0 and CONV :1 :0.

(V SCEARSE, 01-7879)

TRSDOS 2.0A ACCOUNTING DISKETTES - OPTION TO AVOID DIRECTORY ERROR

When backing up TRSDOS 2.0A accounting diskettes, you may receive an error due to the directory and alternate directory not being on the same track. An option around this is to format the destination diskette to be a mirror image of the source disk. If the source disk has a directory on track 44 and no alternate directory, you can format the destination diskette by the following example:

    FORMAT :1 {DIR=44,ALT=00}

Then continue with your backup procedure.

(V OTTERBINE, 01-7879)

SCRIPSIT 16 (26-6431, 01.01.00) - SEARCHING FOR A USER PRINT CODE

Page 149 of the SCRIPSIT 16 Reference Manual says that you can search for a user print code as a control character. This function does not work in this version of SCRIPSIT 16.

(K MOORE, 01-7879)

SCRIPSIT 16 (26-6431, 01.01.00) - INSTALLATION ERROR MESSAGE

When installing SCRIPSIT 1.1 on Xenix, it is possible to get the error: "MEMORY FAULT - CORE DUMPED". This is not necessarily a real memory error. This message will also be displayed if the /usr/bin directory has the wrong permissions.

To correct this, log in as root and type:

    cd /usr   <ENTER>
    chmod 755 bin   <ENTER>
    chown bin bin   <ENTER>
    chgrp bin bin   <ENTER>

This would be corrected in any future version of SCRIPSIT 16.

(N BRUNLIK, 01-7879)

XENIX 3.1 - LPD FILE AND TANDY PRINTERS

In the /etc/default/lpd file on Xenix 3.1, there is a line which says "FILTER=NO". This line tells lpd not to attempt to optimize overstriking. Lpd's method of doing this does not work with Tandy printers, so we use FILTER=NO to turn off the feature.

(D. A. CONN, 01-7879)

TANDY 1000 & 1200 PFS:FILE (25-1140 & 25-3161) - DATA FILE FORMAT

PFS:File data files on Tandy 1000 and Tandy 1200 HD have the same data format. Data files that are created on 25-1140 (Tandy 1000 PFS:File) can be used with 25-3161 (Tandy 1200HD PFS:File) or vice versa.

(P NGUYEN, 01-7879)

___

FRIDAY! (25-1149, 02.00.00) - CUSTOM REPORT TITLE LINES

When using Friday! with the DMP-200 printer, Custom Report title lines will be double-spaced. If the title needs to be single-spaced, include the title lines in the actual report contents, specifying the line and column positions for the title lines.

(V SCEARSE, 01-7879)

FRIDAY! (25-1149, 02.00.00) - OPERATING SYSTEM DATE

The Friday! manual states that the operating system date will appear in the date prompt. This is incorrect. The date that appears in the Friday! date prompt is always the date last entered.

(V. SCEARSE, 01-7879)

MICROSOFT WORD (25-1153 & 26-5314) - PRINTING ITALICS ON THE DMP-430 (26-1277)

To print italic text on the DMP-430, you must modify the file dmp430.prd. To do this, you must first convert the file into a text file by using the convprd program on the Microsoft Word utility disk.

Use the backup copies of the Microsoft Word install diskettes that you have made. Insert the second disk into drive A. Before running the convprd program, make a backup of the file dmp430.prd. Copy it to a file called dmp430.old.

At the A> prompt, type the word convprd. The program will prompt you to type in the name of the PRD file you wish to convert:

"Name of PRD file:"

Type: dmp430.prd <ENTER>

After you press <ENTER>, the program asks you the name of the text file:

"Name of Text file:"

Type: dmp430.txt <ENTER>

Next, the program asks you what type of conversion you are doing:

"Select PRD to Text conversion (Press T)
    or Text to PRD conversion (Press P):"

You want to create the text file dmp430.txt so you can modify it, so type:

T <ENTER>

(continued)

MICROSOFT WORD - PRINTING ITALICS ON THE DMP-430 (continued)

The message "Conversion complete" should appear after you have successfully converted your file. Now you must edit the text file to allow the italic characters to be used. Use Microsoft Word to edit the text file. Start up Microsoft Word and load the file dmp430.txt. Go to the end of the file. The lines to change are 15 lines from the bottom. Currently, they look like this:

        byte:136 mod:4
        byte:140 mod:0

When you finish editing these lines, they should look like this:

        byte:136 mod:0 "^[B^A"
        byte:140 mod:0 "^[B^@"

Save the file dmp430.txt and exit the Microsoft Word program. Once you are at the MS-DOS prompt, you must convert the text file back into a PRD file. Execute the convprd program as before, except this time respond to the prompt:

        Select PRD to Text conversion (Press T)
           or Text to PRD conversion (Press P):

with: P <ENTER>

You will get a prompt asking whether you want to overwrite the file dmp430.prd. Respond with Y.

Now you will be able to use italics with Microsoft Word. If you have made any mistakes during this session and wish to start over, just copy your backup file dmp430.old back to dmp430.prd and try the instructions again.

(J. MULLINS, 44-0069)

WORDSTAR (25-3170) - DEFAULT FORMAT LINE

The format line is not saved with each individual document. Therefore, you must adjust the margins in the program each time you run Wordstar.

The ^OF will show you the format line change. While you have your cursor in the text, type:

        <CONTROL><O><F>

and the margins will adjust to the current text.

NOTE: Be sure to use <CONTROL><O> NOT <CONTROL><0>.

(J. PARRIS, 01-7079)

WORDSTAR (25-3170) - WITH TANDY 2000, DWP-510 & SF-510 SHEET FEEDER

This information is for printing with the Tandy 2000 on the DWP-510 printer (26-1270) and the DWP-510 Sheet Feeder (26-1477). Special codes must be entered in the Winstall procedure to enable use of the Sheet Feeder. These codes are listed below:

Available User Defined Codes are: ^PQ   ^PW   ^PE   ^PR

The printer control codes are to be entered in the WINSTALL installation under User Defined Codes, these codes can be entered in ASCII, Hexidecimal, or Decimal (which is how they are listed in the Sheet Feeder manual).

The hexidecimal codes for using the Sheet Feeder are:

    1B4B - BIN #1
    1B4C - BIN #2
    ØC   - EJECT

When using the Sheet Feeder you MUST place the Sheet Feeder control codes (User Defined Codes) in a Header. You MUST allow for the Sheet Feeder margin of 4 lines. (When using the Sheet Feeder, the paper is fed up past the printhead 4 lines, causing a loss of 4 lines per page.) This means that you MUST specify that your page length is 62 lines with the ".pl" Dot command or your page breaks will creep on successive pages.

Finally, you should be using the DWP-410 printer driver. Also please note that the top and bottom margins have not been altered. Therefore, your customers may want to change (experiment with) these settings until they acquire the format they desire.

(J PARRIS, 01-7879)

WORDSTAR (25-3170) - CHANGING THE STANDARD PITCH

When using Winstall on Wordstar to change the standard pitch to 12 and the alternate pitch to 10 (on a Daisy Wheel printer), you must also change the initialization sequence of the printer in the Winstall procedure. The steps are as follows:

1. At the installation menu select "A" for Menu of Printers. Next select the appropriate driver for your daisy wheel printer and return to the installation menu.
2. Select "B" for Custom Installation of Printers. Then select "D" for Initialization. Change the printer from:
    ØE 1B 15 1B ØF ØD   to   ØE 1B 15 1B ØE ØD
3. Select "Q" for Character Pitch. Change the alternate pitch from:
    1B ØE   to   1B ØF
4. Save all the changes and exit from the Winstall program of Wordstar.

(R. MOORE, 01-7879)

TANDY 2000 DBASE III (26-5353) - MEMORY REQUIREMENT

Unlike the other dBase packages, dBase III for the 2000 requires 384K memory. This is not stated in the RSC-15 catalog.

(V. SCIARSE, 01-7879)
